

Green Invest 60

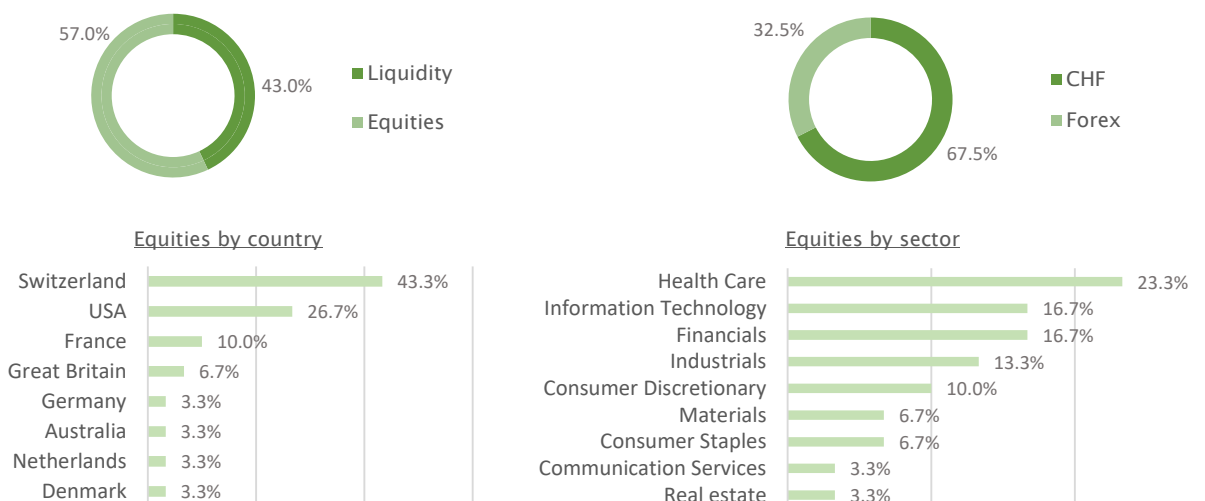

Description

The "Green invest 60" strategy is a carefully selected investment portfolio implementing a highly sustainable approach, containing about 30 individual securities. Equities are selected according to a clearly defined quantitative selection process, taking into account various criteria including return, risk, and sustainability. The equities exposure is capped at 60%.

*Performance according to model calculation. In practice, deviations are to be expected (e.g. different timing of rebalancing, no consideration of foundation fees, taxes and spreads). Grey shaded performance figures are based on a historical simulation with monthly rebalancing by backcalculating the portfolio composition as of September 1, 2021.

Investment philosophy

In addition to profitable capital accumulation for the future, the environment is to be protected and the climate balance improved. To this end, we have created an investment portfolio that stands for responsible, ethical, social, and ecological investment. These aspects of sustainable investment complement the traditional investment criteria of profitability, liquidity, and security. To illustrate the impact, we have developed a sustainability calculator on LibertyGreen.ch that shows what the LibertyGreen portfolio can achieve.
